# CHILD PROTECTION AND SAFEGUARDING PERFORMANCE OVERVIEW

#### Introduction

This report provides a summary of Thurrock Children Social Care performance in respect of key indicators of child protection and safeguarding activity. The detailed tables and analysis that follow consider progress in relation to previous years and, where applicable, in comparison to other Local Authorities including Thurrock's nearest statistical neighbour authorities. The most recent available data used for the comparisons is for 2011-12.

#### **Contacts**

Thurrock continues to see a high number of contacts. These are requests for service. In 2011-12 Thurrock received nearly 11,000 contacts. This represents a rate per 10,000 0-17 population of 2851. To date this year we have received nearly 8,000 and expect the year-end rate to be similar to last year.

Cases that proceed for allocation to social work teams are known as referrals. Thurrock received a total of 1391 referrals in 2011/12, equivalent to 361 referrals per 10,000 0-17 population. This rate remains below both the national average rate (534) and that of our nearest statistical neighbours (555) and has done so for the past two years. End of year forecasts indicate that the referral rate will again remain below average.

#### Referrals

The level of contacts and the application of thresholds by the service that determine what cases progress as referrals continue to be subjected to robust scrutiny and assurance activity. Data on repeat referrals shows Thurrock over the past 3 years consistently below national and benchmark average. The results of audit activity also indicate that threshold application is consistent and appropriate.

Contact and referral rates also need to be considered in the context of both historical and current services available for children in the borough before they enter care proceedings. Thurrock is committed to the establishment of earlier targeted support to assist demand management, improve step-down arrangements and support the shift from a more threshold-based service to one that offers a more inclusive offer of earlier help for children and families, wider use of CAF and effective cooperation and partnership working across all agencies.

While we implement our service re-designs and plans for early offer of help, we are maintaining our focus on our 'front-door' arrangements for children's social care. We have identified several other factors which may be impacting on high levels of activity and which we are currently investigating further. These include; evidence of increasing numbers of re-constituted families with large sibling groups, families and young people with legacy of care involvement and perceived increase in the migration of families from east London into the borough.

#### **Children Subject to Child Protection Plans**

The rate of children subject to child protection plans in Thurrock is high - 43 per 10,000 0-17 population in 2011-12 compared to average rates of 38 both nationally and among our statistical neighbours. Currently there are 217 children subject to child protection plans – a rate of 56.

The reasons for children being on Child Protection Plans are categorised by different forms of abuse - physical abuse, sexual abuse, neglect and emotional abuse. Thurrock does not have any particularly different pattern of need from other parts of the country with neglect featuring as a dominant risk to children. During the year, Thurrock has had to implement the Complex Abuse Child Protection Procedures on three occasions. Ask Neale

This reflects the pattern of high level of child protection investigation. In 2011-12 the rate of s47 investigations in Thurrock was 134 per 10,000 0-17 population. This compares to the national rate of 110 and statistical neighbour rate of 111.

#### Assessment and Review - Rates and Timescales

Rates of initials assessments in Thurrock are in line with our referral rate but below both national and statistical neighbour rates. In 2011-12 Thurrock completed 336 initial assessments per 10,000 0-17 population compared to rates of 398 and 394 nationally and statistical neighbour. Projections for 2012-13 indicate that this pattern will continue. Compliance with timescales is strong. 95% of initials are completed within timescale, against a national average of 77% and statistical neighbour average of 76%.

In 2011-12 Thurrock completed 317 core assessments per 10,000 against a national average of 195 and statistical neighbour average of 209. Currently projections indicate that Thurrock's rate will rise further to 356 per 10,000. Timescales on cores are also strong. In 2011-12 93% were completed within 35 days in Thurrock against a national average of 76% and statistical neighbour average of 79%. The projected outturn for the current year shows a decrease in this performance to 84% - though remaining well above average.

The high level of core assessments has been investigated through independent and internal audit. This has shown the application of thresholds to be applied appropriately. As part of the service's ongoing quality assurance and performance analysis, other possible factors are being considered.

These include current practice of counting pre-birth assessments as core assessments (Thurrock completes a high number of pre-birth assessments) which is not necessarily the practice elsewhere. Also the requirement for a number of social work teams, including the Teams for Disabled Children and Adolescent Team completing and updating core assessments – again a practice that does not always happen elsewhere.

It is important that all child protection plans are reviewed (by multi agency case conferences) to ensure that they are being implemented and remain appropriate to a child's needs and assessed risk of significant harm. Also to determine whether any further actions are required. Thurrock also ensures that reviews are completed on a timely basis. 97% of children on plans are reviewed in timescale which is in line with the national average.
