Subject: 24/00521/LATEMP - The New Court house

Good morning Barbara,

Environmental Protection would like to raise objections to the above TEN.

I would like to reiterate the following points raise by EP at the SAG:

- Limit of 70 dB is high. 75 dB is generally accepted for urban stadia or arenas whilst 65 dB(A) is recommended for other urban and rural venues. Or 15 dB above background.
- 85 dB(C) is also high.
- Noise limits have been set for NSRs at King Street, when addresses at Karen Close are closer to the stage
- Residential receptors are approximately 15m away from the stage, the location is not suitable for this nature of event particularly in the garden.

There is an extensive complaint history regarding this address and subsequently notice has been served on the premises.

I do not feel this type of event is appropriate in this location surrounded by residential receptors and will likely give rise to complaints.

Kind regards

Sadie Stowell | Environmental Protection - Acoustics
